

VRTSync

PLATFORM OVERVIEW

Your entire property — *visually understood.*

The living map your HOA has always needed. We connect maps, maintenance history, documents, and contractor activity into one living record — so you never start from zero again.

VISUAL RECORDS. REAL-TIME RESULTS.

vrtsync.com

THE PROBLEM

High turnover. Lost records. Expensive déjà vu.

Every time a board member leaves or a contractor changes, critical knowledge walks out the door. Communities end up paying for the same work twice — or making costly mistakes that could have been avoided. The real knowledge of what was done, when, and why lives in someone's memory instead of a system everyone can see.

1

Turnover means lost knowledge

Critical history disappears with every board or contractor transition. Each handoff starts the learning curve over again.

2

No institutional memory

Static maps and scattered documents can't capture the full picture. The reasoning behind decisions gets lost in transition.

3

Costly redundancy

Communities pay repeatedly for the same work — and absorb avoidable repairs — for lack of documentation and continuity.

4

Contractor confusion

Without logged, visual proof of work, every task becomes a debate and every invoice an argument.

\$18,000

Spent locating one "lost" irrigation shut-off valve that no record had ever captured. On another property, years of 2-wire issues left critical nodes unwinterized — season after season. Boards exhausted, managers blamed, contractors unchecked.

THE SOLUTION

VRTSync gives boards a **durable, transferable record** of asset history, maintenance events, warranties, and capital-planning context — so no matter who's on the board, managing the community, or holding the shovel, **everyone works from the same source of truth.**

WHAT VRTSYNC DOES

Everything your community manages — **connected and remembered.**

Dynamic Map Layers

Every component — irrigation, trees, snow zones, turf, pet stations — mapped and clickable.

Task Management

Create, assign, and complete tasks tied to exact map points. Know what to do, and where.

Service Logging

Contractors submit records with photos. Boards review work with visual proof.

Contractor Portal

Clear expectations, faster payments, and a full audit trail for every provider.

Document Library

Upload and tag PDFs, bids, warranties, and reports to the assets they belong to.

Real-Time Reporting

Exportable views for irrigation, trees, invoices, and more to simplify board meetings.

ONE PLATFORM, MULTIPLE WINS

Built for everyone **at the table.**

VRTSync was built for the real-world headaches of HOA boards, property managers, and contractors. It doesn't just store data — it solves the daily problems that turnover and scattered records create.

 HOA Boards	 Property Managers	 Contractors
◆ Preserve community knowledge between board terms ◆ See what's done, pending, and overdue at a glance ◆ Defend budgets with mapped data and service records ◆ Reduce unnecessary repairs and inflated invoices	◆ Reduce time and friction across the property ◆ Organized, transferable records in one place ◆ Streamlined communication with boards and crews ◆ Make faster, smarter decisions with confidence	◆ Clear scope definition for every job ◆ Asset-level documentation of work performed ◆ Fewer disputes with logged, visual proof ◆ Faster payments and a clean audit trail

"Less confusion. More trust. Lower costs. That's the VRTSync effect."

WHY IT MATTERS

Property values are directly tied to landscape and irrigation performance. VRTSync protects that value through **clarity, continuity, and control** — turning scattered property knowledge into a connected, usable system.

THE MAP LAYERS

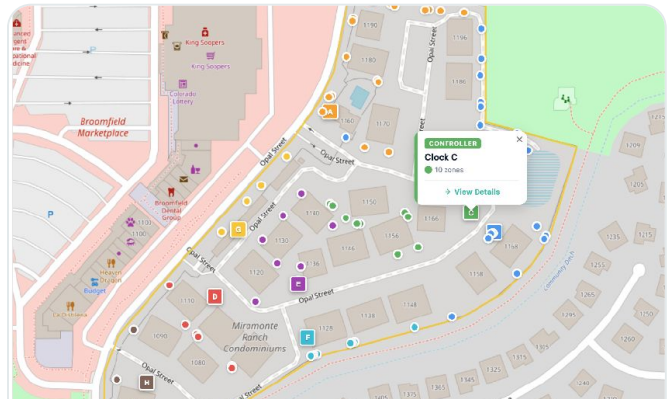

See the whole property, one layer at a time.

Each base layer maps a different system and connects it to real maintenance data — so the map isn't just visual, it's usable. Click any asset to see its history, condition, documents, and the work performed.

Community

Common areas, landscape beds, turf and native-grass zones, signage, and pet stations — the shared assets the community owns.

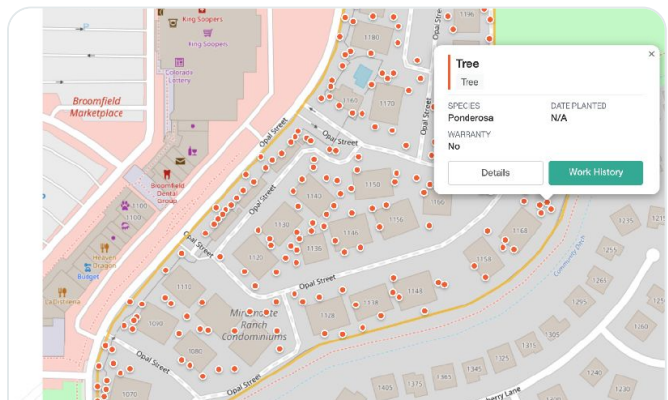

Irrigation

Valves, heads, controllers, and zones mapped to the point. Locate the shut-off before the emergency, not during it.

Snow

Plow routes, plowable areas, and hazards documented so every crew clears the property the same way, every storm.

Tree

A living inventory of species, condition, warranty status, and work history — one click per tree.

CUSTOM LAYERS — ADDED ON REQUEST

Beyond the four base layers, VRTSync supports custom layers tailored to a property — xeriscape conversion, roofing, siding, paint, and more — built out as a community's needs grow.

GETTING STARTED

Onboarding is hands-on and field-tested.

01

Portal Creation & Setup

Secure portal with roles and access levels. Admin onboarding and feature configuration.

2-3 BUSINESS DAYS

02

GIS Mapping & Data

On-site walk to capture GIS data with GPS tools. Features verified and organized for the platform.

UP TO 60 DAYS

03

Population & Integration

Layers built and synced. Task logging, documents, visuals, and user testing completed.

3-5 BUSINESS DAYS

The result: a fully mapped, fully documented, fully operational command center for your community. Pricing is fully custom — a one-time startup cost to map your property and build your portal, plus a transparent monthly fee driven by your property's point count and asset mix.

WHAT'S NEXT — THE PLATFORM IS JUST GETTING STARTED

- ◆ Xeriscape planning & water-saving analytics
- ◆ Contractor certification tracking
- ◆ Water usage dashboard (OCR)
- ◆ Duplicate repair alert system (AI)
- ◆ Full mobile app + offline mode
- ◆ Enhanced task automation
- ◆ AI-powered maintenance insights
- ◆ Resident read-only view

LET'S MAP YOUR COMMUNITY TOGETHER

Your property's history shouldn't live in someone's memory. It should live in VRTSync.

Schedule a demo or get a quote — no hard sell, just a walkthrough with HOA pros.
